COMPUTER NETWORKING AND SECURITY DIPLOMA

Description:

Hands-on training program that strikes a balance between the latest computer theories and their applications. Students learn about real-life networking environments, making you immediately productive upon graduation and prepared to take on a variety of information technology roles relating to local area networking, network support, computer systems administration, network security and user support. Exposure to the networking technologies will help you to develop problem solving and analytical skills. You will also learn about the necessity for security and how the needs of information assurance affect all aspects of implementing, managing, and utilizing network resources. Students will also be prepared to continue learning and advancing within the field, allowing you to work within your organization to apply networking to business strategy, tactics, and goals.
